Navigating financial services for cannabis can be difficult.

payQwick makes it easy.

CRB FINANCIAL SERVICES

WE SERVE ALL CANNABIS BUSINESSES: Retailers - Distributors - Cultivators - Manufacturers - Ancillary

PayQwick provides cannabis business accounts to licensed operators to receive, store, and send funds electronically.

PayQwick is a trusted and specialized financial institution that actively serves more than 1,000 licensees across 12 states.

THE PAYQWICK DIFFERENCE

CORE TREASURY AND PAYMENTS SOLUTIONS

Manage your cash, receivables, and payables with a PayQwick Account. Connect your supply chain to pay and get paid faster.

ROBUST COMPLIANCE

Fully compliant with state laws, FinCEN guidance including BSA/AML programs, seed-to-sale tracking measures, ongoing account monitoring, and transaction activity.

SEAMLESS PLATFORM

View balances, make payments, create and send invoices, including escrow. Manage your entire operation with one login with a secure online platform.

PAYQWICK FINANCIAL NETWORK

Accelerate growth with specialized financial services designed for cannabis businesses. PayQwick clients receive partner rates and VIP access.

With PayQwick, you can feel confident that your cash, receivables, and payments are secure. Let's grow together.

CLIENT'S NAME: **GPCA**

CATEGORY: **Marketing Consulting, Design**

PROJECTS: **Branding, Event Oversight,
Graphic Design, Promo Items**

GPCA is a community health center association that Proforma Brand X has provided many logos for both the corporate identity and events/program logos. We design and print their annual report every year. GPCA has contracted with Proforma Brand X to provide Event Management services for their annual conference. Our relationship has spanned more than 15 years.

Georgia Primary Care Association
Accuracy • Community • Accessibility

ANNUAL REPORT
2019-2020

<p>1.36 MILLION patient visits for Chronic Conditions</p>	<p>488,000 MILLION patient visits for Preventative Services</p>	<p>140,000 # 79% of Centers Dental Services</p>
<p>376,000 at 94% of Centers Behavioral Health visits</p>	<p>61 Providers Received DATA Weaver Medication-Assisted Treatment for Opioid Disorder</p>	<p>14,000 at 25% of Centers Vision Services</p>

Special Populations Served (compared to 2018)

- Homeless Patients 13% Increase
- Agricultural Workers/Families 8% Increase
- Public Housing Patients 102% Increase
- School-based Patients 13% Increase
- Veterans 16% Increase

BEYOND THE NUMBERS

The Georgia Primary Care Association (GPCA) and Georgia health centers have a long history of responding to and managing disasters, including severe thunderstorms and tornadoes, hurricanes and tropical storms, flooding, and wildfires. The COVID-19 public health emergency (PHE) and the necessary responses caused GPCA and its health centers take its emergency response to the next level. The impacts of COVID-19 on health centers were tremendous and required responses that prioritized the health and safety of our providers and staff and our communities, created and maintained a safe infrastructure for in person and virtual visits, and supported the fiscal health of the health centers.

Quality Data Awards

During 2020 more than **94%** of the GPCA member organizations were recognized by HRSA for quality, reducing health disparities, enhancing patient access to a broad range of health care services, and/or improving the use of health information technology including telehealth, social determinants information use and patient engagement.

ABOUT GPCA

WHO WE ARE

Established in 1977, GPCA is a state wide organization located in the Atlanta Metropolitan Area. GPCA is quite familiar and knowledgeable about the relevant rules and regulations governing FQHC - Section 330 organizations. GPCA is very active in the development of various operational models for FQHC organizations. GPCA provides direction and leadership for required community development activities that are related to both the development of new start FQHC organizations and operations of existing FQHC organizations.

- Assist in teaching legislators
- Develop service(s)
- Develop new health centers for underserved Georgians

GPCA represents all 14 HRSA funded Georgia FQHC organizations. Collectively, the Georgia FQHC organizations have approximately 239 clinic sites in 121 counties in the state.

GPCA works with its members to:

- Share information
- Provide training and technical assistance

GPCA and the individual FQHC members have made efforts to work in concert with other health care organizations in Georgia, including the Georgia Rural Health Association, the Georgia Hospital Association, and many other organizations and individuals. Our organization has also made efforts to educate Georgia's elected officials regarding the work of GPCA and the member FQHC organizations. These efforts have allowed greater involvement with our elected officials, both state and federal, and have resulted in GPCA and the FQHC organizations included at stakeholders in health care reform and health delivery changes throughout Georgia.

WHO IS NEOBIOSIS?

NEOBiosis is a company based in regenerative scientific, research, clinical and medical integrity and regulatory compliance. Our goal is to demonstrate the safety and efficacy of perinatal regenerative tissues while complying with FDA rules and regulations.

NEOBiosis, LLC is a CDMO (Contract Development & Manufacturing Organization) operating under cGMP (current Good Manufacturing Practice) standards.

NEOBiosis produces perinatal tissues for research and clinical trials.

Dr. Ben A. White, President & Chief Scientific Officer, received his Ph.D. from Cornell University, Icahn School of Medicine, Division of Regenerative Medicine and oversees all product development and manufacturing.

12055 Research Drive
Box 207, Lab 150
Alachua, FL 32615

Regenerative Science.

Visit our website, NEOBiosis.com, for a complete list of publications from our leadership.

The US Food and Drug Administration prohibits manufacturers from making claims about their research ability to treat specific health conditions. As a manufacturer we encourage our customers to research and determine whether Purified Amniotic Fluid is right for their research and clinical trial needs. Purified Amniotic Fluid safety is validated by a specific independent, CLIA certified laboratory. Purified Amniotic Fluid is produced once by highly trained experts under our NEOBiosis cGMP standards. Our Regenerative Science Laboratory Purified Amniotic Fluid is harvested from prenatal fluid collected by highly trained experts under our NEOBiosis cGMP standards. During the process, healthy amniotic cells with stem-like potential, known as amniotic epithelial cells, are isolated and cultured to produce regenerative products. For FDA, cGMP, and WHO, Purified Amniotic Fluid is a sterile, aqueous product for the purposes of research and clinical trials.

What is Wharton's Jelly?

Wharton's Jelly is a gelatinous tissue from the umbilical cord, which provides structural support, growth factors and extracellular vesicles essential to fetal and maternal health. Using proprietary technology, NEOBiosis scientists are able to extract the Wharton's Jelly from fresh, healthy donor umbilical cords, while maintaining the biological activity of soluble growth factors, like VEGF, Integrins, IGFs, IGF1RAs, IgGs, carbohydrates, and structural matrix components like lamin and collagen.

These components are essential for tissue homeostasis, growth and repair. NEOBiosis WJ products are available as an acellular matrix (Wharton's Jelly Matrix) or a cellular matrix (Wharton's Jelly Cellular).

Wharton's Jelly Matrix

- ECM (collagen, Fibronectin)
- IGF and IGF1RAs
- Hyaluronic acid

Wharton's Jelly Cellular

- ECM (collagen, Fibronectin)
- IGF and IGF1RAs
- Integrins
- IGF1R, IGF1R2, IGF1R3, etc.

DEVELOPMENT & MANUFACTURING

Our facility operates in accordance with current Good Manufacturing Practices (cGMP) following guidelines published by the FDA.

We provide small to large scale manufacturing.

We have extensive experience working with perinatal birth tissues including cells, EVs and plasma, which may be used during the early and late phases of the drug development, preclinical and clinical process.

Our projects are expertly staffed with passionate scientists who are some of the top researchers in the field of regenerative medicine and stem cell biology.

Our scientific and medical team are supported by talented business operators & administrative staff.

Our state-of-the-art R&D facility is located at the University of Florida — the #1 biotech incubator in the world.

We operate two dedicated FDA-registered tissue processing, ISO-7, cleanrooms, operating under Current Good Manufacturing Practice standards.

We have effective, turn-key transfer teams ready to work with you to meet your goals and requirements.

We partner full transparency with frequent & open communication when it comes to our progress with your project.

With our Research & Development laboratory located at the Sid Martin UF InnoVate Biotechnology Institute, the #1 biotech incubator in the world, we have full access to UF core facilities and the resources we need to provide the **most rigorous scientific development** for your product.

NEOBiosis Holiday Promotion

Thank you for being a valued NEOBiosis customer!

Monday, November 29th through Friday, December 10th

Purchase 10 vials of any product and receive 1 FREE VIAL of that product + 1 VIAL of Wharton's Jelly Matrix (if available).

OUR PRODUCTS

- Purified Amniotic Fluid (Cytosomes™) 1 ml and 2 ml vials
- Wharton's Jelly Matrix (Acellular) 1 ml vial
- Wharton's Jelly Cellular 1 ml and 2 ml vials
- Lilium Topical Aesthetic 1 ml vial

NEOBiosis is a biotechnology company focused on developing and manufacturing innovative perinatal products for research and clinical trials. We are uniquely positioned to help usher in this new era of medicine, which focuses on the potential of perinatal birth tissues including cells, EVs, and matrix. Our goal is simple: to help redefine the field of regenerative medicine through regenerative science and shape the future of the fledgling industry through meaningful partnerships and collaborations.

Call or email your distributor to take advantage of this limited time offer.

NEOBiosis Regenerative Science.

Musculoskeletal Ultrasound + Regenerative Medicine for the Hip

JANUARY 20-22, 2022
Beaver Run Resort and Conference Center, Breckenridge, CO

Join Dr. Ben White, Friday, January 21 6:15 - 7:00 AM for "Pregnancy is a Unique Case of Mesenchymal Paracrine Signaling: Discovering That 'Fetal' Healing is Translatable."

Loss of tissue-specific stem cells capable of repair and regeneration in adults drives the biological process that we recognize as "aging". Renewal and recovery of stem cell regenerative functions in aged individuals has been reported in heterochronic parabiosis experiments using plasma "transfer" from young laboratory animals. Pregnancy is an unusual form of heterochronic parabiosis, as the placenta prevents the exchange of most blood cells between parabiosis. Instead, plasma containing small extracellular vesicles (EVs) can readily cross the placental barrier and enter the maternal circulation. These enriched extracellular vesicles produced by placenta, fetus and mother are essential for fetal organogenesis and the progression of a healthy pregnancy. The vesicles also impact the mother in the parabiosis of pregnancy as they are essential for tissue repair and the modification of the maternal physiology to cope with the rigors of pregnancy. Interestingly, these EVs can be harvested from the amniotic fluid of EVs and harnessed in order to promote anti-aging, tissue repair and regeneration in unrelated adults. Using healthy related EVs we demonstrated that EVs are a "stemming" action in vivo and pro-regenerative capacity to promote tissue repair and reduce arthritic joint inflammation in vivo. These data therefore create a new paradigm in the quest for a natural solution to age-related degeneration.
